- Support serial number, IP address and DDNS access;
- Support multi-channel switching (32 channel max);
- Support remote play;
- Support device configuration, modification and delete;
- Support Pan, Tilt & Zoom control;
- Support Snap-shot and view;
- Support video records and view;

- Support alarm reminding;
- Support intercom;

## 2. Installation

### 2.1 Acquire vMEyeCloud

Users can acquire this app either through downloading from android market or from the manufacturers.

As downloading from android market, you may first search “vMEyeCloud”, and install it on line, as the following picture shows:

2.1a

Then click “Install”, the application will be automatically installed into your mobile phone, like the below picture shows 2.1b:

2.1b

## 3. Application Running

### 3.1 Interface Description

After successfully installed the application into mobile phones, it is ready to run,

just click the vMEyeCloud icon to run the application. Access to landing interface, log By User or By Device. Like 3.1a:

3.1a

3.1b

- **By User, like 3.1a:** User name and password is gotten from Cloud server, which users login to <http://xmeye.net/> to register. Add and save the devices on server, and get the device list after logging (Mark: Click “Cloud” when logging, otherwise, can only see the device list, but cannot connect successfully).
- **By Device, device list as 3.1b:** Click “Add” on top left of “Device List”, to access “Device Detail”. You can add manually or click “Search” to add the devices on LAN, like 3.1c, 3.1d, 3.1e:

3.1c

3.1d

3.1e

- Name: The names of equipment, which can help you identify different devices, for examples, you can type the names based on the location of the equipment. The name will be showed on the topside title bar of display interface.
- Connection: P2P and Address. P2P adopts serial number to connect; Address adopts the traditional IP address or DDNS and port to connect the device.
- Serial No.: Users can get the serial number from the system information-serial number on PC or the label on devices. You can also click QR scan to access.
- Address: DVR/IPC IP address or DDNS. (Must be an Internet address)
- Port: It means TCP port, and you can acquire TCP port in the setting information of the device. Please use the default port: 34567.
- User ID: the default user name of terminal device is “admin”.
- Password: the default password of terminal device is blank, match with user name, .
- Max Channel: the channels of your DVR supported, 32 channels max.

After editing, please click “Save” to save the information. Click “Back”, turn back to “Device List”, you will see the name, serial number, address ect.

Click “Edit” on top right to get delete icon, to delete the device; click “>” on right to change the information of the devices, like 3.1f:

3.1f

### 3.2 Live Preview

Click “Live Preview” on top left in the main menu interface, back to display interface, double click the windows to enlarge it, it will show PTZ control after clicking it again. It also supports gesture to zoom in, like 3.2a as below:

### 3.2a
